

Endpoint Insights Features, Tools & Insights Breakdown

Security

USER INSTALLED SOFTWARE	Full visibility to what software is installed on each endpoint, including user installed and IT pushed	
MONITORS	Visibility to which users are using what monitors and what types of connections, data that Configure doesn't natively collect. Determine model, serial number, size, date of manufacture, connection type, screen settings, current resolutions and more.	
DOCKING STATIONS	Understand what docking stations are installed within your environment, including docking station name and computers connected.	
SOFTWARE	See browser version, .NET version, PowerShell version, recently used applications, OS dashboards, auto-start details and more.	
COMPUTERS	See user details per device including who's using what computer and details such as chassis type and computer type. See all computer-related details, including CD-ROM, hard drive per computer, memory, operating system, BitLocker management, browser objects and over 100 other data points. Auto-start software, boot details, battery health. Search for computer by MAC address	

Users

NETWORK DRIVES	See user details per device including who's using what computer and details such as chassis type and computer type. See all computer-related details, including CD-ROM, hard drive per computer, memory, operating system, BitLocker management, browser objects and over 100 other data points. Auto-start software, boot details, battery health. Search for computer by MAC address	
NETWORK PRINTERS	See which users are mapped to a particular server. See printer details, server, print share name, port, user, free space, network/local printer and more.	
ODBC CONNECTIONS	Get both user and computer ODBC connections for both x66 and x64 platforms. Determine which servers, database or driver is used to connect to these data sources. See what drivers are installed on each computer, and whether they are in use.	
COMPUTER BY USERNAME	Find out what device a given user is using, in real-time and automated. See users currently logged on, user details, top console user details and real-time logged on details in ConfigMgr, all in one spot.	

Security

LOCAL ADMINISTRATORS	Know which users or groups exist on which devices. See who is within Local administrator group on each computer, optionally excluding well-known accounts.	
SOFTWARE UPDATES	Plethora of information that tells you software update status, health of your software update environment and more. If using a third-party catalog, third party updates will show up in these reports.	
BITLOCKER & TPM	Understand your BitLocker and TPM statuses for your devices and see status on collection of computers	
ENDPOINT PROTECTION	See whether or not there are active viruses in your environment, anti-virus signature version, engine version and client version, to name a few.	

Warranty

LOCAL ADMINISTRATORS	Collect warranty details for laptop, desktop, servers and virtual machines. Get normalized model, description, service level, start date, end date and deliverables.	
SOFTWARE UPDATES	Over 150+ vendor data is available within Endpoint Insights. The top vendors include: HP, Dell, Lenovo, Microsoft, Toshiba, Ciara Technologies, Acer, Panasonic, HPE and Fujitsu.	

ConfigMgr

LOCAL ADMINISTRATORS

Evaluate performance and identify potential problem spots in your ConfigMgr solution stack – Console, DB, DPs, WSUS, and Clients

Security

SSRS REPORTS

Includes native SSRS reports and dashboards which allow you to set out email subscriptions to any reports

CONFIGMGR

Natively extend the inventory of ConfigMgr and create all necessary options needed to run your environment

SERVICENOW

Leveraging existing ServiceNow integration, Endpoint Insights data can be collected via ServiceNow.

OTHER ITSMS

Leveraging existing integration, Endpoint Insights data can be collected vi ITSMs
