

# Gain access to powerful, actionable data

End manual data collection with **Endpoint Insights**

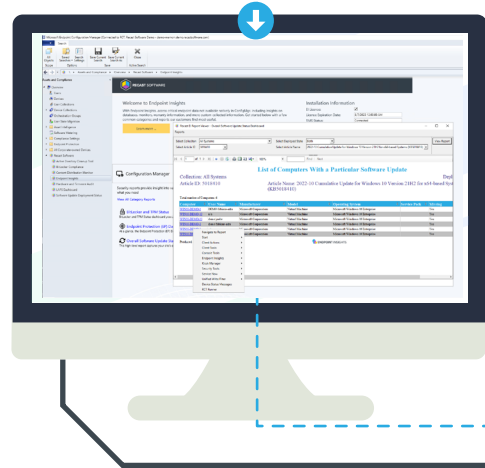

## Single Pane Hardware Insights and Warranty Data

Identify and compile all hardware data – computers, servers, monitors, cords, docking stations, printers – from a single pane of glass. Then easily group hardware into collections and run group updates.

No need to track down ever-changing PC warranty data. Endpoint Insights pulls from all major OEMs and then calculates replacement cost.

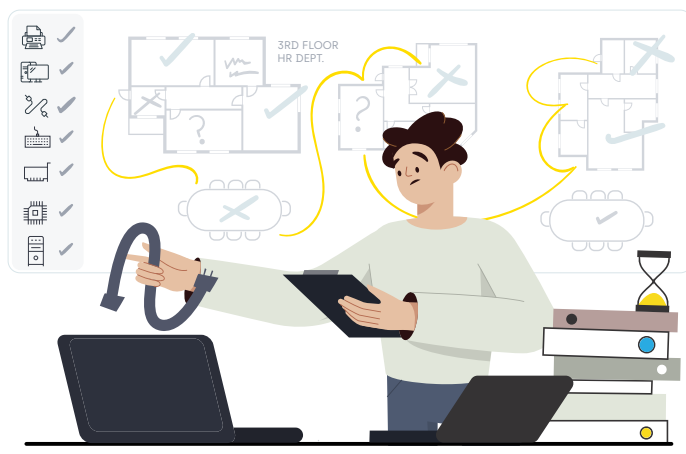

### ENDPOINT INSIGHTS

## Additional Software Insights

**Endpoint Insights** also enables you to uncover unique software and user profile insights not natively available in ConfigMgr, helping to improve environmental security. Then take quick action on much of this novel data using **Right Click Tools**.

### RIGHT CLICK TOOLS

### Before Endpoint Insights:

Collecting hardware data required IT staff to go desk to desk, building to building and compile data on spreadsheets.

### With Endpoint Insights:

Gain single pane insight into most hardware and software, enabling action without masses of IT data collectors.

“The software paid for itself almost immediately ... Doing one count for our six schools took a week at least ... with Endpoint Insights reporting it takes about 5 minutes now.”

— BEN DUMKE, HORTONVILLE AREA SCHOOL DISTRICT INFORMATION SYSTEMS MANAGER

**\$1M**  
SAVED IN  
THE FIRST  
YEAR

With over **350,000 endpoints** to support, a major national bank needed to make every service call count. Each trip to and from a workstation **cost between \$65-\$100**. They knew they were wasting trips when replacing monitors by not knowing which cables the workstation needed. Endpoint Insights enabled them to instantly and remotely retrieve that simple piece of data, **saving an estimated \$1 million** the first year of implementation.

**RECAST SOFTWARE**

### About Recast Software

Recast Software is a crucial part of how teams create secure and compliant environments in an ever-changing IT landscape. Our software does this by seamlessly integrating with existing IT infrastructure to quickly remediate issues, ensure compliance, enhance security, and maintain clear visibility across all devices.
